Six Day Creation

Six Day Creation

Thousands...Not Billions with Dr Don DeYoung

$19.99

When people are told that a dinosaur bone has been determined to be tens of millions of years old, that obviously doesnâ€™t square with the biblical record of man being created on Day 6 with the land animals. But DeYoung now demonstrates that Christians no longer have to puzzle over this glaring contradiction. What is the age of the earth? Is it thousands or billions of years? Does it matter? Evolution demands that the earth is billions of years old, which is in direct conflict with the plain teaching of Genesis. Many people persuaded by the claims of mainstream science, would argue that the earth is very old. However, the Bible clearly teaches that God created the world in six literal days. Combining the Biblical -='chronologies with a six-day creation suggests a young earth, not an old one. What is at stake is the perceived truth and integrity of the book of Genesis and ultimately our confidence in Scripture. From 1997 to 1005, the Institute for Creation Research facilitated a group of scientists known as the RATE Team (Radioisotopes and the Age of The Earth) to carefully examine conventional dating methods and conduct extensive scientific research which now offers persuasive evidence that the earth is thousands, not billions of years old. The discoveries from this research project are quite astonishing, and should at least cause those who hold to the old-earth view, to reexamine the evidence. This compelling documentary summarizes the extensive eight-year research project, and includes a brief dramatization of the all-too-common experience of a Christian student whose faith is challenged by a secular science professor steeped in evolution. Included in this special edition of THOUSANDS. . . NOT BILLIONS are several useful bonus features that can be utilized in many ways, including in the classroom. Running time (main feature) 48 minutes. Color. Stereo.
